

We have 2 GREAT field app tools to help with your repossessions while in the field.

Our Field App lets your agents manage the repossession orders assigned to them. It will also allow them to create the update, while they are at the location.

Very simple and easy to use, built for mobile devices, so the experience is great for the user.

The app has “pretext” ability to allow the agent to make choices regarding the unit and or location, without having to type the full update in on their device.

In addition, you can use the inherent ability of the mobile device to create a voice to text update within the update portion of the tool.

To download the mobile please see the following:

For Android devices, go to the Play Store and search for RepoSystems, and download the “RepoSystems Mobi Site” app.

For iPhone or Apple Devices, go to the App Store and search for RepoSystems and download the “RepoSystems Mobi Site” app.

For more information on our GPS DNA products please email sales@reposystems.com or call us at 866-906-0573
